

ACKNOWLEDGEMENTS

ACKNOWLEDGEMENTS.

Certain individuals, government agencies, and other organizations provided assistance during this study. We wish to express our appreciation, and make note of their contributions in the following acknowledgements.

Topographical and geological information was supplied by Arthur A. Socolow, State Geologist; William E. Edmonds and Robert D. Sponseller, Pennsylvania Bureau of Topographic and Geologic Survey; Elmer D. Patterson and Robert Steacy, U.S. Geological Survey, and Russell A. Brant, Ohio River Valley Water Sanitation Commission.

Information relative to mapping mined areas was provided by Charles C. Yeloushan, U.S. Bureau of Mines. Additional reference material was obtained from the Butler County Planning Commission Reports.

The evaluation of streamflow characteristics was made possible by the U.S. Geological Survey, Water Resources Division. The Pittsburgh Office made the stream discharge measurements, and the Harrisburg Office loaned us the Fluorometer for use in travel time determinations. Also, data obtained from FWQA and the Pennsylvania Department of Health assisted in water quality studies.

Locally, we received support and cooperation from the Slippery Rock Creek Watershed Association, Professor Murray A. Shellgren of Slippery Rock College, and various local citizens and property owners.

The Pennsylvania Department of Mines and Mineral Industries gave assistance in matters relating directly to the investigation, such as property access, and in general, provided guidance throughout the study.

Finally, we make note of the cooperation received from the Pennsylvania Game Commission, the Soil Conservation Service and the Pennsylvania Department of Forests and Waters, and express our appreciation to them.
