

OBJECTIVES TO BE ACHIEVED BY ABATEMENT MEASURES

On the basis of the acid reduction requirements presented in Table 1 and the correlation of AMD discharges with stream flows presented in Table 2, any abatement plan selected must meet the following objectives for each basis of design as shown in Table 3.

TABLE 3
DESIGN OBJECTIVES

Acid Load Reduction Required	
<u>Basis Of Design</u>	<u>(Lbs./Day)</u>
Design Low	13,900
Design Average	21,000
Design Wet Weather	28,600
Design Maximum	28,600
